

WORK HEALTH & SAFETY LEGISLATION requires staff to have communication at all times, knowledge of their location, and ability to request SOS in some way.

An employee who travels for business using company transport makes their vehicle a “place of work” requiring the same OHS compliances as if they are in the office.

EXPLORER enables this duty of care.

1 ALWAYS TRACKING: EXPLORER will automatically switch over to Iridium satellites when cellular coverage is not available. Provides real time data on the location of staff. Driver ID option. Chooses the most economical and effective system available.

2 MONITORS: the safety of people in remote areas with optional SOS Duress Alarm Button and accident or rollover detection. Alerts by Email if regular check-in schedule is missed.

3 FULLY FEATURED: EXPLORER can hold hundreds of geo-fences to implement arrival or departure alerts, and can detect harsh driving events for sophisticated driver profiling. Options include 5 digit keypad, rugged data entry console, driver ID reader, relay kits for immobilization and temperature monitoring.

4 EASILY INSTALLED: EXPLORER is the smallest one box hybrid unit on the market. Caters for the most demanding applications

5 TWO DIGITAL OUTPUTS: enable numerous configuration options for external devices with FIVE DIGITAL INPUTS offering monitoring of temperature, power take- offs etc.

WHOLESALE ENQUIRIES WELCOME

**Total coverage in
Australia & beyond**

Purchase \$1399 inc GST
or 36 Month Rental
\$44 PER MONTH*
